# ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 1, 1939.

Sir: In compliance with the provisions of section 253, title 31, U. S. Code, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1939, being the Sixty-seventh Annual Report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this Bureau upon the production and consumption of the precious metals in the United States for the calendar year 1938.

#### OPERATION OF THE MINTS AND ASSAY OFFICES

Institutions of the Mint Service

During the fiscal year ended June 30, 1939, seven mint institutions were in operation: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which handles the major portion of the gold imported and exported, and its auxiliary silver bullion depository at West Point; gold bullion depository at Fort Knox, Ky.; mint at New Orleans, conducted as an assay office; and assay office at Seattle. The two last-named institutions are, in effect, merely bullion-purchasing agencies and also serve the public by making assays of ores and bullion. Electrolytic refineries are maintained at the New York, Denver, and San Francisco institutions.

# Coinage

Domestic coin manufactured during the fiscal year amounted to 255,566,260 pieces, as compared with 540,375,283 pieces during the preceding year. As in previous years, the coin most largely produced was the one-cent piece. The production in 1939, in amount \$15,538,378, consisted of 70,511,806 subsidiary silver coins, \$11,029,058; 66,469,400 nickel coins, \$3,323,470; and 118,585,054 bronze coins, \$1,185,850.

Coinage for foreign governments amounted to 48,187,200 pieces, compared with 18,392,444 pieces during the prior year. The foreign coinage consisted of silver, nickel, and bronze coins for Honduras, Nicaragua, Colombia, Cuba, and Venezuela, all made at Philadelphia.

The grand total of domestic and foreign coins made in 1939 amounted to 303,753,460 pieces, a decrease of 255,014,267 pieces from the prior year.

# Bullion Deposit Transactions

The number of bullion deposit transactions during the year totaled 54,028, including 272 inter-mint-service transactions, as compared with 56,005 and 298, respectively, during the prior year. The deposit transactions required 91,506 assay determinations, which compares with 85,187 assay determinations during the prior year.

## Gold Operations

Gold acquisitions by the mints and assay offices during the year amounted to \$3,224,890,527.63; receipts from other Treasury offices of domestic and foreign coin melted during the year amounted to \$924,646.88; and transfers between mint-service institutions amounted to \$79,025,827.39. These transactions total \$3,304,841,001.90, compared with \$1,210,362,607.83 for the prior year.

The acquisitions include \$210,734.73 of gold received at \$20.67 per fine ounce. The increment on this gold amounted to \$146,107.71.

## Silver Operations

The Government's acquisitions of silver during the year totaled 416,391,965 fine ounces, at an average cost of 46.7 cents per fine ounce and a total cost of \$194,551,774. The acquisitions consist of the following:

Item	Amount (fine ounces)	Cost	
Newly mined domestic silver	63, 150, 404 352, 718, 452 372, 169 150, 940	\$41, 308, 430 153, 023, 320 156, 629 63, 395	
Total	416, 391, 965	194, 551, 774	

United States coin received for recoinage totaled 3,204,054 fine ounces, with a recoinage value of \$4,429,313. Silver deposited by other governments, for foreign coinage, totaled 15,521,737 fine ounces. Silver transfers between mint-service institutions totaled 49,723 fine ounces. These items plus the silver acquired during the year brought the total transactions in silver to 435,167,479 fine ounces, compared with the prior year's total of 412,354,246.

During the year 1939, \$193,422,222 of silver certificates were issued against 149,600,000 fine ounces of silver bullion valued at \$1.29+per fine ounce, the statutory monetary value of silver. Such silver had been acquired at an average price of 57.9—cents per ounce. The difference between the cost of the silver held to secure such certificates and the monetary value of such silver is \$106,872,260, and this amount constitutes seigniorage.

The open-market price of silver in New York (mean of bid and asked) during the fiscal year 1939 averaged \$0.42996. The highest point was \$0.43062, which prevailed from July 1, 1938 to June 26, 1939. The price declined during the last four days of June to \$0.38062 on June 30, 1939.

For newly mined domestic silver a return to the depositor of \$0.6464+ per fine ounce, established by the President's proclamation of December 1937, prevailed during the entire fiscal year.

THOMAS JEFFERSON COIN.

## Refineries

The electrolytic refineries produced during the year 5,588,913 fine ounces (191.6 tons) of electrolytically refined gold bullion, and 3,459,089 fine ounces (118.6 tons) of silver bullion. During the prior year the quantities produced were 3,079,343 fine ounces (105.6 tons) of gold and 1,605,294 fine ounces (55.0 tons) of silver.

Stocks of unrefined gold and silver bullion in mint institutions

increased during the fiscal year 1939 by approximately 175 tons, to

1.764 tons. The increase in 1938 was about 274 tons.

#### New Design Coins

The new design Thomas Jefferson 5-cent nickel coin was issued during the fiscal year 1939, for replacing the Indian-head or Buffalo design coin. The obverse of the new coin carries a portrait likeness of Thomas Jefferson, while on the reverse appears a likeness of Monticello, his historic Virginia home. Though many millions of these coins have been issued and remain outstanding, they still are not a common medium of exchange in the daily experience of the general public. Illustrations of this coin, which was designed by Felix Schlag, face this page.

No commemorative coins, bearing special designs relating to

historic events, were initially issued during the fiscal year 1939.

# Mint Buildings

The silver bullion depository at West Point, operated as an auxiliary of the New York assay office, was occupied in July 1938. movement of silver bars from the Government buildings and rented quarters in New York City to the depository continued from early in July to the middle of February—approximately 7½ months. average of 20 truck loads daily was moved, the total movement consisting of 1,101,320 refined silver bars containing 1,169,444,788 fine ounces of silver.

At the San Francisco Mint the newly constructed silver vaults were placed in use in February 1939. Movement of the silver bars from the old mint continued from February to June, a period of about 4 months. The movement consisted of 306,049 bars with fine silver content of 339,787,786 fine ounces of silver.

# Stock of Coin and Monetary Bullion in the United States

On June 30, 1939, the estimated stock of domestic coin in the United States was \$1,088,037,109, of which \$547,078,589 was standard silver dollars, \$379,811,988 subsidiary silver coin, and \$161,146,532 minor coin.

The stock of gold bullion, including coin, held in the Treasury on the same date was valued at \$16,110,078,913, an increase of \$3,147,-124,982; and the stock of silver bullion was 2,089,983,790 fine ounces, an increase of 411,451,384.

# Production of Gold and Silver

Domestic gold production during the calendar year 1938 was 5,089,811 fine ounces with a monetary value of \$178,143,400 compared with 4,804,540 fine ounces with a monetary value of \$168,-158,900 in 1937. The quantity output was about 4 percent more than that for the previous year of largest production, 1915, when the total was 4,887,604 fine ounces.

Domestic silver production during the calendar year 1938 totaled 62,665,335 ounces. This compares with 71,941,794 ounces for 1937, and with the record production of 74,961,075 fine ounces for 1915.

# Industrial Consumption of Gold and Silver

Gold consumption in the industrial arts during the calendar year 1938 is estimated at \$30,156,754. Gold returned from industrial use amounted to \$30,480,835. These items give a net return from industry of \$324,081. This compares with \$3,214,393 net industrial consumption of new gold during the previous year.

Silver used in the arts is estimated at 38,620,473 fine ounces, of

which 20,181,626 fine ounces were new material.

Compared with the prior year, there was a decrease in gold consumption of approximately 270,000 ounces, and a decrease in silver consumption in industry of about 12,700,000 ounces.

# Appropriations, Expenses, and Income

Regular appropriations available for the mint service during the fiscal year 1939 totaled \$1,561,920; the appropriation for meeting emergency expenses amounted to \$750,000; the Deficiency Act of March 5, 1938 provided funds for silver movements (totaling \$110,700, available during the two fiscal years 1938 and 1939) of which \$17,360 were obligated in 1938, leaving \$93,340 available for the fiscal year 1939; and reimbursements to appropriations for services rendered amounted to 329,211, making a total of \$2,734,471.

Expenses amounted to \$2,776,707, of which \$2,718,068 was charge-

able to appropriations and \$58,639 chargeable to income.

The regular income realized by the Treasury from the mint service aggregated \$12,809,959, of which \$6,489,967 was seigniorage. The seigniorage on subsidiary silver coin was \$3,569,708, and on minor coin \$2,920,259. Extraordinary income aggregated \$107,018,368, of which \$106,872,260 was seigniorage on silver bullion revalued to \$1.29+ per ounce, and \$146,108 was the increment to \$35 per ounce on revalued gold.

#### General Activities

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1939, and number of employees on June 30, 1939, at each institution, are shown in the following table:

Deposits of gold and silver, income, expenses, and employees, by institutions, fiscal year 1939

Institution	Number of bul- lion de- posit trans- actions	Number of assay determi- nations on bullion deposits	Monetary value of gold and silver receipts, including transfers 1	Gross regular income	Gross expenses	Excess of income (+) or of expenses (-)	Employ- ees, June 30, 1939

# Coinage by the United States for Other Countries

The coinage for other countries during the fiscal year 1939, all by the mint at Philadelphia, totaled 48,187,200 pieces, as compared with 18,392,444 pieces during the prior fiscal year coined by the Philadelphia and San Francisco mints. Details follow:

Country	Pieces	Country	Pieces
Silver: Cuba	20, 000, 000 11, 787, 200 2, 000, 000 800, 000 7, 600, 000 22, 187, 200	Bronze: Honduras. Niearagua.  Total bronze  Total coinage  Prior fiseal year, total coinage	4,000,000 2,000,000 6,000,000 48,187,200 18,392,444

## Mint Issue of Fine Gold Bars for Industrial Use

(On value basis; see p. 48)

The value of the fine gold bars issued for industrial use, in exchange for cash, by the United States mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the fiscal year 1939, was as follows:

Month	Value of bars issued	Month	Value of bars issued
1938: July	\$19, 443. 47 15, 791. 70 27, 049. 14 22, 126. 90 12, 768. 04 23, 166. 31 27, 925. 51 15, 701. 51	1939:  March April May June  Total  Prior fiscal year	\$25, 610. 87 13, 876. 02 28, 034. 51 13, 110. 31 244, 604. 29 313, 368. 15

Receipts and Disbursements of Gold Bullion and Balances on Hand

Receipts and disbursements of gold bullion during the fiscal year 1939, and balances on hand June 30, 1939, as compared with June 30, 1938, are shown in the following table:

Institution	Balance on hand June 30, 1938	Receipts during fiscal year 1939 (details below) <sup>1</sup>	Total	Disbursements during fiscal year 1939 (details below) <sup>1</sup>	Balance on hand June 30, 1939

## Minor Coins Outstanding

The following statement shows the coinage of minor coins, by denominations, the amount on hand at the mints, issued, melted, and outstanding June 30, 1939. Minor coins were first manufactured at the Philadelphia Mint in 1793, at the San Francisco Mint in 1908, and at the Denver Mint in 1911.

Item	Coined	On hand at mints unissued	Issued	Melted	Amount issued and outstanding June 30, 1939
Copper half cents 1 Copper cents Copper-nickel cents Bronze cents Bronze 2 cents Nickel 3 cents Nickel 5 cents	\$39, 926, 11 1, 562, 887, 44 2, 007, 720, 00 73, 654, 003, 26 912, 020, 00 941, 349, 48 100, 475, 567, 70	\$878, 546. 34	\$39, 926. 11 1, 562, 887. 44 2, 007, 720. 00 72, 775, 456. 92 912, 020. 00 941, 349. 48 99, 478, 937. 70	\$1. 84 383, 580. 95 809. 106. 95 1, 803, 576. 71 344, 050. 16 287, 926. 02 11, 179, 415. 65	\$39, 924, 27 1, 179, 306, 49 1, 198, 613, 05 70, 971, 880, 21 567, 969, 84 653, 423, 46 88, 299, 522, 05
Total	179, 593, 473. 99	1,875,176.34	177, 718, 297. 65	14, 807, 658. 28	162, 910, 639. 37

<sup>1</sup> There is no record of the melting of the old copper half cents, but it is believed that few, if any, are now

## Proof Bullion (1.000 fine)

In order to maintain uniformity in assay of bullion in the offices of the mint service, all proof gold and proof silver are made at one institution and furnished to other institutions when required. Proof gold is made at the New York Assay Office, while the Philadelphia Mint makes proof and inquartation silver. During the fiscal year 1938 other mints and assay offices were furnished 276 ounces of proof gold, 72 ounces of proof silver, and 5,272 ounces of inquartation silver.

#### Operations of the Melting and Refining and of the Coining Departments, Fiscal Year 1939

The aggregate quantity of metals operated upon in the abovementioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1939, was 95.0 million fine ounces of gold and 90.6 million fine ounces of silver. There were also operated upon at the coinage mints 50.6 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative offices, as prescribed in section 355, title 31, United States Code, are as follows: Melter and refiner-gold,

0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

#### GOLD BULLION

# Wastage of Coinage Metal and Loss on Sale of Sweeps

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1939, was \$2,997.59. A loss of \$3,406.21 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the following table:

		Assay				
Item	Philadel- phia			office at New York	Total	
Silver wastage: Coining departmentNiekel wastage:		\$160. 58	\$15.77		\$176. 3 <b>5</b>

# Assay Commission's Annual Test of Coin for 1938

Section 363, title 31, United States Code, provides for an annual test of the domestic coinage executed during each calendar year by a commission, of whom part are ex officio members, the others, who serve without compensation, being appointed by the President. purpose is to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight. The Commission,

<sup>&</sup>lt;sup>1</sup> Conducted as an assay office since 1910. <sup>2</sup> Allotinent made from a lump construction appropriation.

which met at the Philadelphia Mint February 8, 1939, reported the following results of their examination of the 1938 coinage:

In accordance with section 3539 of the Revised Statutes, your committee on counting reports that the packages said to contain the pieces reserved by the several mints for the trial of coins were delivered to us by the superintendent of the mint at Philadelphia.

A liberal number of packages were selected from the deliveries of each month of all denominations coined, and the coins contained therein were counted and found to agree with the number designated on each envelope.

The committee on assaying has completed the assays on samples taken from different lots of coin representing all denominations coined during the year 1938 by the United States mints at Philadelphia, San Francisco, and Denver.

No gold was coined at any of the mints during the year 1938.

The result of the assays upon coins and mass melts made from coins is satisfactory, being well within the legal limits of tolerance, which is three onethousandths for silver coins.

The highest and lowest assays on individual silver coins selected were as

	Highest	Lowest
Philadelphia Mint	901. 0	898. 4
Denver Mint	900.0	899. 0
San Francisco Mint	900. 6	899. 0

Mass Melts:

Philadelphia Mint	899. 3
Denver Mint	899. 3
San Francisco Mint	899. 5

The committee on weighing reports that it received from the committee on assaying the residues of the several parcels of reserved coins, and took therefrom at random such a number of pieces of each of the denominations represented and so distributed by dates of coinage as seemed to be sufficient for the purpose of weighing. Accordingly, 40 pieces were selected for weighing. These coins have been severally weighed by the committee and their respective weights ascertained to an accuracy of 0.01 grain, and the results recorded. The weights of these coins are given in the appended table. It will be noted that every coin weighed was within the deviation allowed by law.

The coins were directly weighed against a set of sealed coin weights, supplemented by a set of grain weights, delivered to the commission from the Bureau of Standards. Washington, D. C. in scaled mackages and accompanied by corn

of Standards, Washington, D. C., in sealed packages and accompanied by certificates signed by the Director of the Bureau. The weighings were made on a Wm. Ainsworth & Sons, Inc., type TA Spec. balance, an even arm analytical balance, which was tested for sensitiveness and equality of arms and found to be

satisfactory for the purpose.

The maximum deviation from the standard of the heaviest and the lightest coins of each denomination from each mint is shown in the following table:

Item	Legal	Philad	elphia	San Fr	ancisco	Denver	
	deviation allowed	Heavy	Light	Heavy	Light	Heavy	Light
Half dollar	Grains 1. 5 1. 5 1. 5	Grains 0. 22 0. 80 0. 65	Grain3 0. 40 0. 69 0. 25	Grains 1 0, 43 0, 19 0, 50	Grains 2 0. 05 0. 40 0. 10	Grains 0. 20	Grains 0. 54

<sup>1</sup> Daniel Boone commemorative half dollar. <sup>2</sup> Oregon Trail commemorative half dollar.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1938, is respectfully submitted.

NELLIE TAYLOE Ross, Hon. HENRY MORGENTHAU, Jr., Director of the Mint. Secretary of the Treasury.

There was no coinage of regular half dollars at the mint of San Francisco, or coinage of quarter dollars at the mint of Denver in 1938.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1938

# REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1938

#### INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1938 is estimated to have been 5,089,811 fine ounces, valued at \$178,143,400, and the production of silver is estimated at 62,665,335 fine ounces, valued at \$40,510,924. A comparison of these figures with those of 1937 indicates about 285,000 fine ounces increase in production of gold and approximately

9,276,000 ounces decrease in silver production.

In continental United States, the State of largest gold production, California, increased its output in 1938 more largely than any of the other States, its increase being about 148,000 fine ounces to a total of over 1,317,000 fine ounces. Washington and Oregon materially increased their output, the former by about 35,000 fine ounces and the latter by over 26,000 fine ounces. The increase in the Philippine Islands was larger than that of California, it amounting to 152,000 fine ounces, giving the year's total of over 844,000 fine ounces, which exceeded that of any State except California. Alaska's increase amounted to 31,000 fine ounces, and its total output for the year was nearly 660,000 fine ounces.

The 1938 silver product increased more largely in Colorado than in any other State of the Union—by over 1,500,000 fine ounces as compared with 1937. The larger reductions occurred in Montana, nearly 5,000,000 fine ounces; Utah, 2,400,000 fine ounces; Arizona, over 2,000,000 fine ounces; Idaho, over 1,100,000 fine ounces, and Nevada, over 600,000 fine ounces. Idaho continued as the State of largest silver output, its total being nearly 18,400,000 fine ounces.

with Utah second in rank, nearly 10,300,000 fine ounces.

A brief review of mining conditions, for which acknowledgements are made to the United States Bureau of Mines, follows. The production figures therein differ, as explained above, from the Bureau

of the Mint production estimates. Further information concerning same can be obtained by those interested by addressing the Bureau of Mines at Washington.

ALASKA

The production of gold from ores and gravels of Alaska during 1938 was 664,973 fine ounces valued at \$23,274.055, an increase of 6 percent over 1937, according to Chas. W. Henderson, of the United States Department of the Interior, Bureau of Mines. Since there are no smelters or refineries in Alaska, the bulk of the gold produced in 1938 was in the form of bullion and dust sent to United States mints and assay offices either directly or through banks or bullion buyers located in the larger mining centers of Alaska. The rest was contained in high-grade ore and concentrates sent to the Selby (Calif.) and Tacoma (Wash.) smelters. Some very small lots of bullion, dust, and high-grade ore and concentrates were sent to experimental plants and small capacity smelters located in the western part of the United States.

Floating connected-bucket dredges accounted for 42 percent of the total gold output from all sources in 1938, being 9 percent higher than the 1937 production from this type of operation. There were 44 dredges in operation in 1938, an increase of 3 over 1937. The gravel handled by these dredges averaged 49 cents in value of recoverable gold per cubic yard washed. The United States Smelting, Refining, and Mining Co., operating 6 dredges in the Fairbanks (part of Tanana) district and 3 dredges in the Nome district using auxiliary hydraulic and drift mining methods, was by far the largest producer from this type of operation. Other producers of a notable quantity of gold from floating connected-bucket dredges were: The Arctic Circle Exploration, Inc., in the Fairhaven district; Alluvial Gold, Inc., C. J. Berry Dredging Co., and Gold Placers, Inc., in the Circle district; and the New York Alaska Gold Dredging Corporation in the Tuluksak-Aniak district.

The increased use of mechanical equipment, such as draglines, slack-line scrapers, caterpillar-bulldozers, and hydraulic with auxiliary washing plants caused the gold produced from all types of placer mines, excluding floating connected-bucket dredges, to show the largest percentage increase (10 percent over 1937), but a net increase smaller than that of the dredges. The Yukon Basin, Seward Peninsula, Kuskokwim, and Cook Inlet regions were the largest contributors from this

type of operation.

Gold produced from lode mines decreased slightly (less than one-half of 1 percent) in 1938 over 1937. Nine additional lode mines were in operation, but their added output was insufficient to offset the decline in production from the two largest lode mines in Alaska in 1938. Over 63 percent of the total lode gold produced was contained in the bullion and high-grade concentrates produced by the Alaska Juneau Gold Mining Co. properties in the Juneau district, southeastern Alaska region. The Alaska Juneau Gold Mining Co. mined 4,663,880 tons of rock, of which 2,184,952 tons were rejected as "coarse-tailings"; 2,478,928 tons were "fine milled," from which the gold recovery was 0.0515 ounces per ton in bullion and 0.0081 ounces per ton in galena concentrates. The gold content of rock from "mine to mill" was 0.0398 ounce per ton. Other important producers from this source were: Alaska-Pacific Consolidated Mining Co. and Willow Creek

Mines, Inc. (operated in the latter part of 1938 by the Conwest Exploration Co.), in the Cook Inlet region; the Nabesna Mining Corporation in the Copper River region, and Hirst-Chichagof Mining Co., in the

southeastern Alaska region.

The output of silver, 479,853 fine ounces in 1938, a decrease of 14,487 fine ounces from 1937, was produced as a byproduct of gold and copper mining. Copper mines in the Copper River region, permanently abandoned late in 1938, produced over one-half of the total silver obtained from Alaska ores and gravels during 1938. The remainder was contained in the gold bullion, amalgam, and dust produced from placer and lode mines through the Territory.

#### ARIZONA

The output of gold, silver, copper, lead, and zinc from mines in Arizona in 1938 was valued at \$58,358,401, compared with \$90,855,462 in 1937, a decrease of \$32,497,061, or 36 percent, according to T. H. Miller and Paul Luff of the United States Department of the Interior, Bureau of Mines. General curtailment in the principal copper-producing districts of Arizona caused a decrease in the output of copper ore from 19,928,824 tons in 1937 to 13,047,356 tons in 1938, which resulted in similar decreases in the output of gold, silver, and copper. The output of lead ore and zinc-lead ore also decreased in 1938 but the output of siliceous ores increased from 804,949 tons in 1937 to 928,707 tons in 1938.

The output of recoverable gold from lode mines and placers in Arizona in 1938 was 305,043 ounces valued at \$10,676,505, compared with 332,694 ounces valued at \$11,644,290 in 1937. Gold recovered from copper ore decreased from 176,918 ounces in 1937 to 133,409 ounces in 1938, but gold from dry and siliceous ores increased from 131,927 ounces in 1937 to 150,371 ounces in 1938. Lode mines produced 300,058 ounces of gold in 1938 and placers 4,985 ounces. Dry and siliceous ores yielded 49 percent of the total gold in 1938, copper ore 44 percent, and zinc-lead ore 5 percent; the remaining 2 percent came from other base ores and from placers. Dry and siliceous ores treated at amalgamation and cyanidation mills increased from 431,740 tons in 1937 to 616,544 tons in 1938 and the output of gold (in bullion and concentrates) increased from 84,154 ounces to 103,635 ounces. Ore treated by straight concentration decreased from 18,203,790 tons in 1937 to 10,546,807 tons in 1938 and the gold in the concentrates produced decreased from 89,758 ounces to 78,522 ounces. Crude ore shipped to smelters decreased from 2,340,829 tons in 1937 to 1,659,601 tons in 1938 and gold therefrom decreased from 154,359 ounces to 117,901 ounces. The Phelps Dodge Corporation was by far the largest gold producer in Arizona; the company operated its copper mines at Bisbee, Ajo, and Jerome at a reduced rate in 1938 but the output of gold in copper ore and concentrates shipped to smelters represented 39 percent of the State total. Most of the remainder of the gold from copper ore came from the Magma mine at Superior and the Denn mine at Bisbee. Large producers of gold from dry and siliceous ores (treated chiefly by cyanidation) included the Gold Road, Tom Reed, Big Jim, Gold Standard, Pilgrim, and Pioneer mines in Mohave County, the Mammoth-St. Anthony property in Pinal County, and the Octave, Hillside, and Alvarado mines

in Yavapai County. Most of the gold from zinc-lead ore came from the Tennessee property in Mohave County and the Ruby (Montana)

mine in Santa Cruz County.

The output of recoverable silver in Arizona in 1938 was 7,479,153 ounces valued at \$4,835,008, compared with 9,422,552 ounces valued at \$7,288,344 in 1937. Most of the decrease was due to curtailment in the output of copper ore although silver from lead ore and zinc-lead ore also decreased. Copper ore yielded 61 percent of the total silver in 1938. The Phelps Dodge Corporation was, as usual, the chief silver producer in Arizona and in 1938 its three properties (Copper Queen, New Cornelia, and United Verde) produced 51 percent of the State total. Other large silver producers in 1938 included the Ruby (Montana) group of the Eagle-Picher Mining & Smelting Co. in Santa Cruz County, the Ash Peak property of Veta Mines, Inc., in Greenlee County, and the Magma Copper Co. at Superior, Pinal County.

#### CALIFORNIA

California gold output in 1938 again exceeded that in the Philippine Islands, Alaska, or South Dakota, the other leading producers, according to Charles White Merrill of the United States Bureau of Mines. The quantity of gold produced in 1938 was greater than that for any year since 1862 and its value was greater than that for any year since 1856. Although the data for gold production in California before 1901 do not segregate placer and lode gold, it appears certain that the output of lode gold was greater in 1938 both in quantity and value than in any preceding year in the history of the State. Placer gold production during 1938 is known to have exceeded any year since 1900, and it appears to have exceeded that for any year since un-

restricted hydraulic mining flourished over 50 years ago.

The output of gold from California ores, gravels, and re-treated tailings in 1938 was 1,311,129 fine ounces valued at \$45,889,515 compared with a production of 1,174,578 ounces valued at \$41,110,230 in 1937; the increase in both quantity and value was 12 percent. This represented an accelerating rate of increase as the gain of 1937 over 1936 had been only 9 percent. In 1938 lode mines produced 738,616 ounces of gold valued at \$25,851,560, and placer mines produced 572,513 ounces of gold valued at \$20,037,955. Lode mines accounted for 56 percent and placer mines 44 percent of the total in 1938 compared with a division of 60 and 40 percent, respectively, in 1937. The production of lode gold increased only 5 percent in 1938 compared with 1937, whereas production of placer gold increased 21 percent. Of the gold derived from lode operations, 95 percent was recovered from dry gold-silver ore. The importance of free-milling gold ore in California is brought out by the fact that 46 percent of the lode gold was recovered by amalgamation; cyanidation of sands, slimes, old tailings, and concentrates accounted for 31 percent; smelting of concentrates 22 percent; and smelting of ore 1 percent. These metallurgical data when compared with those for 1937 show a decline in the importance of amalgamation and an increase in the application of cyanidation.

Dredging was the leading method of working placer deposits, both in point of yardage of gravel treated and quantity of placer gold recov-

ered. Floating dredges of the connected-bucket type handled 117,080,000 cubic yards of gravel and recovered 375,296 ounces of gold valued at \$13,135,360 or 66 percent of the placer gold produced in the State in 1938. Dragline dredges (those having floating washing plants, to which gravel is delivered by a dragline type of power excavator) handled 24,560,000 yards of gravel which yielded 118,108 ounces of gold valued at \$4,133,780. Nonfloating washing plants to which gravel was delivered by mechanical means treated 3,538,000 yards of gravel and recovered 23,046 ounces of gold valued at \$806,610. Hydraulic mines accounted for the production of 7,061 ounces of gold valued at \$247,135, derived from 1,719,000 yards of gravel; 97,000 yards of gravel from drift mines were treated with a recovery of 7,144 ounces of gold valued at \$250,040. Small-scale hand methods, including small sluice boxes, long toms, dip boxes, rockers, pans, and dry washers, were used in the production of 41,858 ounces of gold valued at \$1,465,030. Increases in 1938 over 1937 were recorded by all methods except drift mining and small-scale dry hand mining.

Nevada County, because of the productivity of its Grass Valley-Nevada City district, continued to be the leading gold-producing county of the State; 25 percent of the State's gold and 41 percent of the State's lode gold was mined there during 1938. The output of dredges, both connected-bucket and dragline, was largely responsible for the importance of Sacramento, Yuba, Merced, Butte, Placer, Trinity, and Siskiyou Counties. Amador, Calaveras, Eldorado, Mariposa, and Tuolumne Counties on the Mother Lode were important gold producers. In addition, large outputs were recorded for Kern,

Shasta, and Sierra Counties.

The principal gold-producing companies working California mines in 1938, arranged in order of importance as producers, included the Empire Star Mines Co., Ltd., Nevada County (gold ore), Idaho Maryland Mines Corporation, Nevada County (gold ore), Natomas Co., Sacramento County (dredge), Yuba Consolidated Gold Fields, Yuba County (dredge), Capital Dredging Co., Sacramento County (dredge), Lava Cap Gold Mining Corporation, Nevada County (gold ore), Central Eureka Mining Co., Amador County (gold ore), Carson Hill Gold Mining Corporation, Calaveras County (gold ore), Golden Queen Mining Co., Kern County (gold ore), Yuba Consolidated Gold Fields, Merced County (dredge), and Cactus Mines Co., Kern

County (gold-silver ore).

The output of silver from California ores, gravels, and re-treated tailings in 1938 was 2,590,804 fine ounces valued at \$1,674,863 compared with the production of 2,888,265 ounces valued at \$2,234,073 in 1937; the decreases in quantity and value were 10 and 25 percent, respectively. Of the lode silver, 52 percent was derived from dry gold-silver ore; 39 percent from dry gold ore; 7 percent from dry silver ore; and the remaining 2 percent from base-metal ores. A small quantity of silver was recovered as a byproduct of gold dredging. One-half of the lode silver was recovered by flotation followed by smelting of concentrates; 35 percent was recovered by cyanidation of ore, old tailings, sands, slimes, and concentrates; 11 percent by direct smelting; 3 percent by amalgamation of ore and old tailings; and 1 percent by gravity concentration followed by smelting of concentrates.

The principal silver-producing companies working California mines in 1938, arranged in order of importance as producers, were the Cactus Mines Co., Kern County (gold-silver ore), Lava Cap Gold Mining Corporation, Nevada County (gold ore), Lodestar Mining Co., Kern County (gold-silver ore), Frank Royer, San Bernardino County (gold-silver ore), and Golden Queen Mining Co., Kern County (gold ore).

#### CENTRAL STATES

None of the mines in the Central States reported any production of

gold in 1938.

The output of silver from mines in the Central States increased from 206,041 ounces in 1937 to 386,210 ounces in 1938. All of the Michigan output in 1938 (93,634 ounces) was derived from copper ore. The entire output of silver from Missouri in 1938 (292,000 ounces) was from the refining of lead bullion and the treatment of skinnings; no copper ore was treated. Silver recovered from galena concentrates shipped from southern Illinois fluorspar mines in 1938 was 576 ounces compared with 887 ounces in 1937.

#### COLORADO

The total mine output of gold from lode and placer mines in Colorado in 1938, in terms of recovered metal, was 367,468 ounces, compared with 368,905 ounces in 1937 and 366,607 ounces in 1936, a variation of less than 1 percent annually during the 3 years, according to Chas. W. Henderson and A. J. Martin of the United States Depart-The gold produced in 1938 ment of the Interior, Bureau of Mines. was valued at \$12,861,380. The only other minerals produced in the State during the year that exceeded gold in total value of the output were molybdenum and coal. The principal gold-producing districts, in order, were the Cripple Creek district, Teller County, which yielded 40 percent of the State total; Mosquito, Park County, 9 percent; Animas, San Juan County, 6 percent; Summitville, Rio Grande County, 5 percent; Empire, Clear Creek County, 5 percent; Redcliff, Eagle County, 5 percent; Upper San Miguel, San Miguel County, 4 percent; Gold Hill, Boulder County, 3 percent; Sneffels, Ouray County, 3 percent; and Leadville, Lake County, 3 percent. Substantial gains over 1937 were made in gold production in San Miguel, Eagle, Rio Grande, Ouray, Boulder, and San Juan Counties. The largest decreases from 1937 occurred in Park, Lake, Summit, La Plata, and Gilpin Counties.

Colorado mines yielded 7,932,095 ounces of recoverable silver in 1938, compared with 6,260,693 ounces in 1937. Eagle County produced 67 percent of the total output in 1938; San Juan County, 8 percent; San Miguel County, 6 percent; Mineral County, 6 percent; Ouray County, 3 percent; and Pitkin County, 2 percent; and 27 other counties together produced 8 percent. Increases over 1937 of more than 100,000 ounces of silver occurred in Eagle, Mineral, San Juan, and San Miguel Counties; and decreases from 1937 of more than 50,000

ounces occurred in Lake and Dolores Counties.

The number of lode mines in Colorado producing gold and silver in 1938 was 669, and placer mines 592. Thirty-five of the larger lode mining operations employing a total of approximately 3,384 men,

The total ore sold or treated during the year was 1,996,095 tons, of which 1,528,658 tons were classed as dry and siliceous (gold, gold-silver, and silver) ores and yielded 87 percent of the total gold and 26 percent of the silver. Copper ore yielded 5 percent of the gold and 68 percent of the silver. Lead, lead-copper, zinc, and zinc-lead ores combined yielded 3 percent of the gold and 6 percent of the silver (the latter including a small quantity from placer mines). Placer mines produced 5 percent of the total State gold. Approximately 1,841,965 cubic yards of gravel were handled by 2 floating connected-bucket dredges and 25 dry-land and dragline floating dredges; specific data on yardage handled at small-scale placer operations are not obtainable because of lack of knowledge by the operators of the quantity of gravel sluiced. The total production of gold and silver in Colorado, in terms of recovered metals, compiled from all sources by Chas. W. Henderson, from 1858 to 1938, inclusive, has been: Gold, 37,182,538 ounces; silver, 692,441,670 ounces.

#### EASTERN AND APPALACHIAN STATES

The mine production of gold in the Eastern and Appalachian States increased from 10,681 fine ounces in 1937 to 19,928 ounces in 1938. The increase was mainly due to mines in South Carolina though there were other increases in Georgia, North Carolina, Pennsylvania, and Virginia. Four gold lode mines, two in South Carolina and one each in North Carolina and Virginia produced more than 77 percent of the gold recovered in the Eastern States in 1938. There was a sharp decrease in the number of placer mines operated in 1938, but the number of lode gold mines operated increased about one-third.

In 1938 Alabama mines produced only 41 ounces of gold (in 1937 2,460 ounces), Georgia 872 ounces, Maryland 855 ounces, North Carolina 1,878 ounces, Pennsylvania 1,422 ounces, South Carolina 11,681 ounces, Tennessee 236 ounces, and Virginia 2,943 ounces. About 26 placer mines in Alabama, Georgia, North Carolina, South Carolina, and Virginia produced 667 ounces of gold in 1938 compared with 632 ounces in 1937. Placer mines in Georgia yielded 578 ounces. The estimated output of gold in the Southern Appalachian States from 1790 to 1938, inclusive, is recorded as 2,532,776 ounces.

Lead-zinc ore yielded 23 ounces of gold, copper ore and copper concentrates from magnetite ore in Tennessee, North Carolina, and Pennsylvania 1,797 ounces which was 76 ounces more than in 1937.

In 1938, 88,671 tons of siliceous ore from mines in Alabama, Georgia, Maryland, North Carolina, South Carolina, and Virginia were treated yielding 17,441 ounces of gold. Ore treated at gold and silver mills aggregated 87,615 tons yielding 13,894 ounces of gold and gold concentrates shipped to smelters (542 tons) 2,497 ounces. Only 1,056 tons of siliceous ore were shipped crude to smelters; this ore yielded 1,050 ounces of gold. Ore amalgamated (11,621 tons) yielded in bullion 1,633 ounces and ore cyanided (75,994 tons) yielded 12,261 ounces.

The larger producers of gold from siliceous ore were the Haile and Terry mines in South Carolina, the Maryland mine near Bethesda, Md., the Vaucluse mine in Orange County, Va., and the Capps mine near Charlotte, N. C.

The mine output of silver was 94,945 ounces in 1938 against 106,873 ounces in 1937.

Of the 1938 output, copper ore from Tennessee yielded 38,333 ounces, copper ore from North Carolina 4,907 ounces, copper concentrate from Pennsylvania 9,360 ounces, and lead concentrates from zinc-lead ores from New York, Tennessee, and North Carolina 38,263 ounces. Siliceous ores (mainly from North Carolina and South Carolina) yielded 4,813 ounces. Only 39 ounces of silver were derived from placer bullion.

#### IDAHO

The output of gold, silver, copper, lead, and zinc from mines in Idaho in 1938 was valued at \$29,028,103, compared with \$37,840,184 in 1937, a decrease of \$8,812,081, or 23 percent, according to T. H. Miller and Paul Luff of the United States Department of the Interior, Bureau of Mines. Curtailment in the output of lead ore and zinclead ore at the large mines in the Coeur d'Alene region, the principal producing area in Idaho, caused a marked decrease in the output of lead and zinc; silver and copper decreased slightly but the output of

gold increased greatly.

The output of recoverable gold increased from \$1,861 ounces valued at \$2,865,135 in 1937 to 103,513 ounces valued at \$3,622,955 in 1938, a gain of 26 percent; the gold output in 1938 was the largest recorded since 1896 when 112,409 ounces were produced. Gold from lode mines increased 20 percent to 49,434 ounces and that from placers increased 33 percent to 54,079 ounces. Most of the gold from placer mines came from nine connected-bucket dredges operating in Boise, Camas, Idaho, and Owyhee Counties; these dredges treated 6,693,700 cubic yards of gravel in 1938 and recovered 31,234 ounces of gold. Nineteen dragline or power-shovel excavators with either dry-land or floating washing plants operating in 8 counties (chiefly Idaho, Gem, Owyhee, and Boise) treated 2,713,000 cubic yards of gravel in 1938 and recovered 17,448 ounces of gold, an increase of 10,589 ounces over that in 1937. Small-scale placer operations (including drift mining) yielded 5,397 ounces of gold, about the same as in 1937. The largest placer producers in Idaho in 1938 were Fisher-Baumhoff Co. in Boise County, Moores Creek Dredging Co., Warren Dredging Co., and Newsome Creek Placers (all in Idaho County), Jordan Creek Placers in Owyhee County, and Ralph Divis, Inc., in Gem County.

Nearly 88 percent of the total gold from lode mines came from dry and siliceous ores and nearly all of the remainder came from zinclead ore. Dry and siliceous ores treated at amalgamation and cyanidation mills increased from 145,056 tons in 1937 to 186,163 tons in 1938; the 1938 tonnage yielded 19,703 ounces of gold (in bullion and concentrates) and came chiefly from Idaho, Elmore, Lemhi, and Boise Counties. Ore treated at straight concentration plants yielded 22,641 ounces of gold in the concentrates, and crude ore shipped direct to smelters yielded 7,090 ounces. The Golden Anchor mine at Burgdorf, the Triumph mine near Hailey, the Yellow Pine property at Stibnite, the Mayflower mine at Placerville, and the Boise-Rochester property at Atlanta were the chief producers of gold from lode

operations in Idaho in 1938.

The output of recoverable silver in Idaho decreased from 19,587,766 ounces in 1937 to 18,993,676 ounces in 1938, a drop of only 3 percent

in quantity from the record output in 1937, but the value of the silver output decreased from \$15,151,137 to \$12,278,740, or 19 percent, as the average sales price of silver declined from \$0.7735 per ounce in 1937 to \$0.646+ per ounce in 1938. Idaho retained its position as the largest silver-producing area in the United States. Dry and siliceous silver ore yielded 72 percent of the total silver produced in Idaho in 1938, zinc-lead ore 19 percent, and lead ore 8 percent. The output of silver from silver ore and lead ore decreased in 1938 but silver from zinc-lead ore increased, due chiefly to the marked increase in output from the Triumph mine in Blaine County. The Sunshine mine near Kellogg, Shoshone County, retained its position as the largest producer of silver in the United States although its output decreased slightly from 12,152,000 ounces in 1937 to 11,352,154 ounces in 1938. Eight mines—the Sunshine, Polaris, Bunker Hill, Hecla, Triumph, Morning, Crescent, and Page—produced 94 percent of the silver output of the State in 1938. All these mines, except the Triumph, are in the Coeur d'Alene region, Shoshone County.

#### MONTANA

The output of gold, silver, copper, lead, and zinc from mines in Montana in 1938 was valued at \$28,096,746, compared with \$58,402,-016 in 1937, a decrease of \$30,305,270, or 52 percent, according to T. H. Miller and Paul Luff of the United States Department of the Interior, Bureau of Mines. Marked decreases were recorded in the output of silver, copper, lead, and zinc in 1938, due to curtailment in the output of base ores at mines in Silver Bow, Granite, Jefferson, and Sanders Counties, but the output of gold increased slightly because of regular operations at cyanidation mills in several counties.

The output of recoverable gold increased slightly from 202,252 ounces valued at \$7,078,820 in 1937 to 203,313 ounces valued at \$7,115,955 in 1938. Gold from lode mines increased 2,110 ounces to 167,965 ounces in 1938 but gold from placers decreased 1,049 ounces to 35,348 ounces. Dry and siliceous gold ore increased from 644,596 tons in 1937 to 756,223 tons in 1938 and yielded 75 percent of the total gold produced in Montana in 1938. The 1938 output of gold ore comprised 433,233 tons treated at cyanidation plants (310,979 tons in 1937), 77,478 tons treated at amalgamation plants, 190,709 tons treated at concentration plants, and 54,803 tons shipped direct to smelters. The ore treated at amalgamation and cyanidation mills (510,711 tons) yielded 76,890 ounces of gold (in bullion and concentrates), or 38 percent of the State total. Ore treated at straight concentration plants comprised 190,709 tons of gold ore, 109,546 tons of silver ore, 1,561,804 tons of copper ore, and 114,769 tons of zinclead ore; concentrates produced from this ore yielded 32,061 ounces of gold, or 16 percent of the State total. Crude ore shipped direct to smelters (160,118 tons) yielded 59,014 ounces of gold, or 29 percent of the total. The West Mayflower mine (operated by the Anaconda Copper Mining Co.) in Madison County was the largest gold producer in Montana in 1938; the entire output at the mine was crude ore shipped for smelting. Other large lode gold producers in 1938 were the Ruby Gulch mine in Phillips County, the Butte Highlands mine in Silver Bow County, and the Golden Messenger mine in Lewis

and Clark County; cyanidation plants were in operation at these

three properties.

Several new placer operations were started in Montana in 1938, including the new Yuba dredges of Winston Bros. on Prickly Pear Creek and Perry-Schroeder Mining Co. on Hauser Lake and the dragline and washer plants of Ralph E. Davis Syndicate on Grasshopper Creek, Kit Carson Placers on Lowland Creek, and Norman Rogers Mining Co. on Elk Creek; but gains from these plants were more than offset by losses due to suspension of operations on Clancey Creek by the Humphreys Gold Corporation. The Porter dredge at Helena and the Pioneer dredge near Gold Creek were again the largest placer

producers in Montana.

The output of silver in Montana in 1938 was 6,403,962 ounces valued at \$4,139,935, compared with 11,812,093 ounces valued at \$9,136,654 in 1937, a decrease of 46 percent in quantity and 55 percent in value. Silver from Silver Bow County decreased 4,053,327 ounces in 1938 due to the closing of the zinc mines and curtailment in the output of copper mines of the Anaconda Copper Mining Co. at Butte. Silver from Granite County decreased 1,013,138 ounces in 1938 due to the closing of several mines near Philipsburg. Copper ore yielded 60 percent of the State total silver in 1938, silver ore 23 percent, zinclead ore 7 percent, and gold ore 6 percent. Nearly 74 percent of the total silver came from ore concentrated and 24 percent came from crude ore shipped for smelting. The output of silver ore decreased from 246,325 tons in 1937 to 150,930 tons in 1938. The Anaconda Copper Mining Co. was, as usual, the largest silver producer in Montana; in addition to the copper and zinc mines at Butte the company produced considerable silver from the Flathead mine near Kalispell. Other large producers of silver in 1938 included the Comet mine near Basin, the Trout, Granite, Bimetallic, Two Percent, and Silver Prince mines near Philipsburg (Granite County), and the, Big Seven and Florence mines near Neihart, Cascade County.

#### NEVADA

In 1938 Nevada gold production increased slightly over 1937 and in value was larger than that for any year since 1915, but silver output declined both in quantity and value, according to Charles White Merrill of the United States Bureau of Mines. The output of gold from Nevada ores, retreated tailings, and gravels in 1938 was 296,434 fine ounces valued at \$10,375,190 compared with 281,332 ounces valued at \$9,846,620 in 1937, an increase of 5 percent in quantity and value. Silver production in 1938 was 4,355,471 fine ounces valued at \$2,815,658 compared with 4,864,750 ounces valued at \$3,762,884 in 1937, a decline of 10 percent in quantity and 25 percent in value.

Gold was recovered from the following sources: Dry gold ore, 67 percent; copper ore, 16 percent; dry gold-silver ore, 11 percent; placer gravels, 4 percent; and other ores, 2 percent. Compared with 1937, there was a large increase in the importance of dry gold ore as a source of gold in 1938 and a corresponding decrease in the importance of copper ores. Cyanidation was a more important gold-recovery method in Nevada in 1938 than in 1937; 42 percent of the lode gold was recovered by cyanidation. Amalgamation, by which 12 percent of the Nevada lode gold was recovered in 1938, also showed

an increase in importance compared with 1937. The percentages of Nevada lode gold recovered by smelting of concentrates and ore in 1938 were 26 and 20, respectively, and represented decreases compared with the preceding year. The principal Nevada gold-mining companies, arranged in order of importance as producers in 1938, included the Black Mammoth Consolidated Mining Co., Esmeralda County (gold ore), Consolidated Coppermines Corporation (and lessees), White Pine County (copper ore), Getchell Mine, Inc., Humboldt County (gold ore), Nevada Consolidated Copper Corporation, White Pine County (copper ore), Weepah Nevada Mining Co., Esmeralda County (gold ore and old tailings), Consolidated Chollar Gould & Savage Mining Co., Storey County (gold ore), Chiquita Mining Co., Ltd., Clark County (gold ore), lessees of The Tonopah Mining Co. of Nevada, Nye County (gold-silver ore), Penelas Mining Co., Nye County (gold ore), and Sierra Nevada, Ltd., Storey County (gold ore).

Nevada silver was recovered from the following sources in 1938: Dry gold-silver ore, 36 percent; dry silver ore, 29 percent; dry gold ore, 13 percent; copper ore, 10 percent; zinc-lead ore, 7 percent; lead ore, 4 percent; and placer gravel, the remainder. Direct smelting of crude ore accounted for 42 percent of the lode silver produced in Nevada in 1938; 31 percent was recovered by cyanidation, 26 percent was recovered by smelting of concentrates, and the remaining 1

percent by amalgamation.

The principal silver-mining companies in Nevada in 1938, arranged in order of importance as producers, were Desert Silver, Inc., Esmeralda County (silver ore), lessees of the Tonopah Mining Co. of Nevada, Nye County (gold-silver ore), Consolidated Coppermines Corporation and lessees, White Pine County (copper ore), Combined Metals Reduction Co., Lincoln County (zinc-lead ore), Tonopah Belmont Development Co. and lessees, Nye County (gold-silver ore), Bristol Silver Mines Co., Lincoln County (silver ore), Consolidated Chollar Gould & Savage Mining Co., Storey County (gold ore), Sutro Tunnel Coalition, Inc., Storey County (gold-silver ore), Nevada Consolidated Copper Corporation, White Pine County (copper ore), and Nevada Standard Mining Corporation, White Pine County (gold-silver ore).

## NEW MEXICO

Lode and placer mines in New Mexico produced 43,050 ounces of recoverable gold, valued at \$1,506,750, in 1938 compared with 41,171 ounces, valued at \$1,440,985, in 1937, according to mine-production figures compiled by Chas. W. Henderson and A. J. Martin, of the United States Department of the Interior, Bureau of Mines. The Willow Creek district, San Miguel County, yielded 32 percent of the State total output of gold in 1938, all from zinc-lead-gold-silver-copper ore from the Pecos mine. This mine was closed on May 31, 1939, because of a shortage of ore in paying quantity. The Mogollon district, Catron County, ranked second in gold production in 1938; followed, in order, by Steeple Rock, Grant County; Lordsburg, Hidalgo County; Mount Baldy, Colfax County; and Hillsboro, Sierra County. Most of the gold from the Hillsboro district came from placer mines and was recovered by operators using dragline excavators and power shovels for digging the gravel and specially

constructed portable land machines for treating it. Some of the other districts that yielded placer gold in 1938, listed in order of quantity produced, were the Jicarilla district, Lincoln County; White Signal and Pinos Altos, Grant County; Pittsburg, Sierra County; San Pedro, Santa Fe County; Mount Baldy, Colfax County; Orogrande, Otero County; Central, Grant County; and Ortiz Mountains, Santa Fe County.

Silver production in New Mexico in 1938 totaled 1,229,860 ounces, in terms of recovered metals, valued at \$795,061, compared with 1,243,766 ounces, valued at \$962,053, in 1937. Substantial increases in 1938 in the Mogollon, Lordsburg, and Steeple Rock districts were more than offset by a large decrease in the Central district. The Mogollon district produced 35 percent of the State total silver, Willow Creek 26 percent, Steeple Rock 19 percent, and Lordsburg 11 percent.

Some of the large mines in New Mexico that produce copper or lead and zinc as the metals of chief value also yield considerable gold and silver. Of the 2,414,857 tons of ore mined in the State in 1938 by producers of gold, silver, copper, lead, and zinc, 108,689 tons (4.5) percent) were dry and siliceous gold, gold-silver, and silver ores which yielded 49 percent of the State total gold and 59 percent of the silver. These ores came chiefly from the Mogollon, Mount Baldy, Steeple Rock, Victorio (Luna County), Pinos Altos (Grant County), and Sylvanite (Hidalgo County) districts. Zinc-lead ore, which came chiefly from the Willow Creek and Central districts, amounted to 217,707 tons (9 percent of the State total) and yielded 32 percent of the gold and 27 percent of the silver. Copper ore, mostly from the Central and Lordsburg districts, totaled 1,904,374 tons (79 percent), and yielded 12 percent of both the gold and silver. Only 1.265 tons of combined lead and lead-copper ores were mined during the year and their yield of gold and silver was only 0.5 percent and 1 percent, respectively, of the State total. The 182,822 tons of zinc ore produced during the year contained no recoverable gold or silver. Placer mines yielded 6 percent of the State gold and a negligible quantity (167 ounces) of silver. Figures compiled by Chas. W. Henderson show that from 1848 to 1938, inclusive, New Mexico mines have produced 2,048,013 fine ounces of gold and 61,139,542 fine ounces of silver.

#### OREGON

The quantity of gold produced in Oregon in 1938 was 55 percent greater than in 1937 and its value was the largest in the history of the State, according to Charles White Merrill of the United States Bureau of Mines. The output of gold from Oregon ores, gravels, and retreated tailings was 81,729 fine ounces valued at \$2,860,515 compared with 52,662 ounces valued at \$1,843,170 in 1937. Placer mines produced 66 percent of the gold and lode mines 34 percent. Dredges of the connected-bucket type treated 7,258,000 cubic yards of material in 1938 compared with 5,017,000 yards in 1937 and recovered 29,006 ounces of gold valued at \$1,015,210 compared with 17,178 ounces valued at \$601,230 in 1937. Dragline dredges handled 2,891,000 yards of gravel in 1938 compared with 2,085,000 yards in 1937 and recovered 15,939 ounces of gold valued at \$557,865 in 1938 compared with 9,126 ounces valued at \$319,410 in 1937. Connected-bucket dredges handled 64 percent of the gravel and recovered 54 percent of

the placer gold in Oregon in 1938; dragline dredges handled 25 percent of the gravel and recovered 29 percent of the placer gold. Virtually all of the lode gold was recovered from dry and siliceous gold ore; concentration followed by smelting of concentrates accounted for the

major part of the lode gold recovered.

The principal Oregon gold-mining companies in 1938, arranged in order of importance as producers, were: Cornucopia Gold Mines, Baker County (gold ore), Sumpter Valley Dredging Co., Baker County (connected-bucket dredge), Western Dredging Co., Grant County (connected-bucket dredge), Ferris & Marchbank, Grant County (dragline dredge), Rogue River Gold Co., Josephine County (connected-bucket dredge), and B-H Co., Jackson County (dragline dredge). These six companies contributed two-thirds of the gold output of Oregon in 1938.

Oregon ores, gravels, and retreated tailings in 1938 yielded 100,507 fine ounces of silver valued at \$64,974 compared with 60,564 ounces valued at \$46,846 in 1937; the increase was 66 percent in quantity and 39 percent in value. Almost three-fourths of the silver produced in Oregon in 1938 was recovered from gold ore mined by Cornucopia

Gold Mines, Baker County.

#### SOUTH DAKOTA

The minc production of gold in South Dakota in 1938 was the highest in any year on record, totaling 594,847 fine ounces compared with 581,544 ounces in 1937 and 586,353 ounces in 1936, the former record year, according to Chas. W. Henderson and A. J. Martin, of the United States Department of the Interior, Bureau of Mines. The value of the gold produced in 1938 was \$20,819,645. The value of the silver (162,295 ounces, all a byproduct of gold mining) was \$104,918. The producing area in South Dakota is comparatively small, comprising only parts of three southwestern counties—Custer, Lawrence, and Pennington—in what is known as the Black Hills. The bulk of the gold continued to come from the Homestake mine, at Lead, Lawrence County, the largest producer of gold in the United States. This mine has been producing almost continuously since 1876 and from that year through 1938 yielded bullion and concentrates that brought a net return of \$360,075,014 and paid \$115,145,722 in dividends. The ore milled in 1938 amounted to 1,377,314 tons and net receipts for the bullion product (including \$77,860 in silver) \$19,284,460. No concentrates have been made at the Homestake mills in recent years. At the end of 1938 the mine was opened through the Ross shaft to the 4,400-foot level; both this shaft and the new Yates shaft, begun in 1938 to replace the Ellison shaft, are designed to be sunk to a vertical depth of 5,000 feet.

The Bald Mountain Mining Co. group at Trojan was the second largest producer of gold and silver in South Dakota in 1938; it yielded 118,026 tons of ore from which were recovered 23,899 fine ounces of gold, and 34,012 fine ounces of silver, which together brought a net return of \$851,245. The dividends paid during the year totaled \$231,250. The Maitland group in the Maitland district and the Gilt Edge-Dakota Maid group in the Bear Butte district, both also in Lawrence County, were important producers in 1938. An average of more than 100 tons of ore were mined and treated daily throughout

the year at each of these mines. The Golden Slipper group 5 miles east of Hill City, Pennington County, produced 12,000 tons of ore yielding bullion and concentrates valued, at net mint and smelter payments, at \$106,158 in gold, and \$350 in silver. Some gold and silver were recovered from other lode mines in Lawrence and Pennington Counties, operated on a small scale. Placer mines in the State yielded 1,069 fine ounces of gold, and 82 fine ounces of silver in 1938, most of which came from mines on French Creek, Custer County, worked with dragline excavators and portable screening and sluicing Small-scale placer operations were carried on by individuals along streams and gulches in all three counties, but their aggregate output of gold was only 199 ounces. The total production of gold and silver (in terms of recovered metals) in South Dakota from the beginning of production in 1875 to the end of 1938, as compiled by Chas. W. Henderson, has been 18,232,108 ounces of gold, valued at \$419,720,989 and 8,832,407 ounces of silver, valued at \$6,288,627.

### · TEXAS

Silver ore from the Presidio mine at Shafter, in Presidio County, yielded all the gold (except 0.53 ounce contained in 8 tons of lead ore shipped from Sierra Blanca, Hudspeth County) and 96 percent of the silver recovered from mines in Texas in 1938, according to Chas. W. Henderson and A. J. Martin of the United States Department of the Interior, Bureau of Mines. The State total mine output of gold was 439 ounces, valued at \$15,365, and of silver 1,433,008 ounces, valued at \$926,389; in 1937 the production of gold was 562 ounces, valued at

\$19,670, and silver 1,325,660 ounces, valued at \$1,025,398.

The ore of the Presidio mine is found as a replacement of limestone beds and is oxidized, the principal mineral being silver chloride associated with argentite, cerargyrite, galena, anglesite, and cerussite. The mine is equipped with a 350-ton gravity concentration-cyanidation mill, which was operated continuously in 1938 and treated 127,574 tons of ore, yielding 685 tons of table concentrates containing 54.63 ounces of gold, 278,056 ounces of silver, and 684,432 pounds of lead; and precipitates containing 383.84 ounces of gold, 1,101,131 ounces of silver, and 25 pounds of lead. The Plata Verde mine in Hudspeth County, 14 miles southwest of Van Horn, and the Hazel in Culberson County. 16 miles northwest of Van Horn, yielded most of the remainder of the output of silver from the State in 1938. ore from these two mines and small quantities of ore containing a little silver from 4 other mines and prospects in Culberson and Hudspeth Counties were shipped direct to the El Paso smelter. The total production of gold and silver in Texas (in terms of recovered metals) from the beginning of production in 1885 to the end of 1938, compiled from all sources by Chas. W. Henderson-mostly from the Presidio mine—has been 7,099 fine ounces of gold, and 28,749,634 fine ounces of silver.

UTAH

The output of gold, silver, copper, lead, and zinc from mines in Utah in 1938 was valued at \$43,745,902, compared with \$87,897,549 in 1937, a decrease of \$44,151,647, or 50 percent, according to T. H. Miller and Paul Luff of the United States Department of the Interior, Bureau of Mines. Marked decreases were recorded in the output

of all five metals, owing to curtailment in copper operations at Bingham and to the closing of zinc-lead-silver properties at Park

City.

The output of recoverable gold decreased from 322,759 ounces valued at \$11,296,565 in 1937 to 200,630 ounces valued at \$7,022,050 in 1938, a decrease of 122,129 ounces, or 38 percent. Gold recovered from copper ore decreased from 202,427 ounces in 1937 to 98,100 ounces in 1938 as the output of copper ore decreased from 23,197,017 tons to 12,032,385 tons. Gold from lead ore and zinc-lead ore decreased 9,531 ounces and gold from dry and siliceous ores decreased 8,364 ounces. Base ores (copper ore, lead ore, and zinc-lead ore) yielded nearly 65 percent of the State total gold and dry and siliceous ores 35 percent; placers in Utah yielded only 148 ounces of gold in Ore treated at straight concentration plants yielded 62 percent of the total gold in 1938, crude ore smelted 30 percent, and ore to amalgamation and cyanidation mills 8 percent. Mines in the West Mountain (Bingham) district produced 64 percent of the total gold, despite a decrease of 110,759 ounces in the district output. The Utah Copper Co. was, as usual, the largest gold producer in Utah, followed by the United States Smelting, Refining & Mining Co., the Mercur unit of Snyder Mines, Inc., the Mammoth Mining Co., and the Eureka Standard Consolidated Mining Co.; these five mines yielded 74 percent of the State total gold.

The output of silver decreased from 12,869,117 ounces valued at

\$9,954,262 in 1937 to 9,682,732 ounces valued at \$6,259,544 in 1938. Silver from the Bingham district decreased 1,201,685 ounces, chiefly as a result of curtailment by the Utah Copper Co. Silver from the Park City region declined 1,169,976 ounces due to the closing of the Silver King Coalition and Park Utah Consolidated properties early in the year. Zinc-lead ore yielded 47 percent of the total silver in 1938, dry and siliceous ores 32 percent, lead ore 12 percent, and copper ore 9 percent. Ore treated at concentration plants yielded 57 percent of the total silver and crude ore smelted 43 percent. States Smelting, Refining & Mining Co. was again the largest silver producer in Utah, followed by the Tintic Standard Mining Co., Park City Consolidated Mines Co., Utah Copper Co., and Silver King Coalition Mines Co.; these five companies produced 70 percent of the total silver in Utah in 1938.

## WASHINGTON

The output of gold, silver, copper, lead, and zinc from mines in Washington was valued at \$5,510,440 in 1938, compared with \$2,253,-054 in 1937, according to T. H. Miller and Paul Luff of the United States Department of the Interior, Bureau of Mines. The increase of 145 percent in total value was due chiefly to the starting of milling operations at the Holden property of the Howe Sound Co.; the new mill was placed in operation in April and the company became the largest producer of gold, silver, and copper in Washington.

The output of recoverable gold increased from 36,310 ounces valued at \$1,270,850 in 1937 to 74,175 ounces valued at \$2,596,125 in 1938; the 1938 output was the largest in the history of mining in the State. Gold recovered from copper ore increased from only 14 ounces in 1937 to 30,650 ounces in 1938 as the output of copper ore increased from 6,631 tons to 373,120 tons; the Howe Sound Co. treated 371,800

tons of copper-gold-silver ore in the new mill at Holden. Gold from dry and siliceous gold ore increased 5,955 ounces in 1938, due chiefly to the increase in gold ore treated by cyanidation at plants in Ferry and Stevens Counties; gold from gold ore shipped to smelters also increased and came chiefly from mines in the Republic district, Ferry County. Ore treated at straight concentration mills increased from 114,566 tons in 1937 to 631,864 tons in 1938 and yielded 42 percent af the total gold produced in 1938; ore to amalgamation and cyanidation mills increased to 212,161 tons (from 142,790 tons in 1937) and yielded 40 percent of the gold; crude ore shipped direct to smelters (57,664 tons in 1938 compared with 37,470 tons in 1937) yielded 16 percent, and placers 2 percent. Most of the placer output came from operations on the Columbia River in Stevens and Ferry Counties. The Howe Sound Co. was by far the largest gold producer in Washington in 1938, followed by the Knob Hill Mines, Inc., at Republic, the Azurite property of the American Smelting & Refining Co. in Whatcom County, the Aurum Mining Co., Eureka Mining & Milling Co., and the Mountain Lion Consolidated Mines Co. (all at Republic, Ferry County), and the First Thought Mine Corporation at Orient, Stevens County.

The output of silver increased from 126,304 ounces valued at \$97,696 in 1937 to 380,938 ounces valued at \$246,263 in 1938. Nearly half the gain in silver was recorded in Chelan County due to the starting of milling operations by the Howe Sound Co. which became the largest silver producer in the State in 1938. Silver from Okanogan County increased 76,124 ounces in 1938, owing chiefly to operations at the Arlington property; silver from Ferry and Stevens Counties also increased. Gold ore and copper ore each yielded 33 percent of the State total silver in 1938 and silver ore yielded 29 percent. Ore treated at straight concentration plants yielded 65 percent of the silver and ore smelted 20 percent. In addition to the Howe Sound Co. and Arlington Mines, Inc., other important silver producers in Washington in 1938 included the Knob Hill, Aurum, and Quilp properties at Republic, the Silver Queen property (Ark Mines Co.) at Kettle Falls, and the Josephine property (Pend Oreille Mines &

Metals Co.) at Metaline Falls.

## WYOMING

Mines in Wyoming produced 798 fine ounces of gold and 328 fine ounces of silver in 1938 compared with 1,776 ounces of gold and 203 ounces of silver in 1937, according to Chas. W. Henderson and A. J. Martin of the United States Department of the Interior, Bureau The only silver produced in the State in 1938 that was not a byproduct of gold mining was 34 ounces contained in silver ore shipped from the Sunlight district, Park County. Placer mines in the Atlantic City district, Fremont County, worked with dragline excavators and portable land screening and sluicing plants, continued to yield most of the State gold. The total gold produced from seven lode mines and prospects, of which six were in Fremont County, and one in Carbon, was only 194 ounces. Counties producing placer gold, besides Fremont, comprised Albany, Carbon, Sheridan, and The total production of gold and silver (in terms of recovered metals) in Wyoming from 1867 to 1938, inclusive, according to Chas. W. Henderson, has been 76,090 fine ounces of gold and 74,297 fine ounces of silver.

Distribution of the gold and silver production of the United States, in fine ounces. for 1938, as to sources of production [Table furnished by the Bureau of Mines]

<sup>1</sup> Value of gold in 1934 and thereafter calculated on basis of \$35 per fine ounce; prior thereto on basis of

<sup>1</sup> value of gold in 1934 and thereafter calculated on basis of \$35 per fine ounce; prior thereto on basis of \$20.67+ per fine ounce.

2 Value of silver calculated on the basis of the average amount per ounce returned to depositors of newly mined domestic silver; in 1934 at \$0.64+ per fine ounce, in 1935 at \$0.71875, in 1936 at \$0.7745, in 1937 at \$0.7735.

3 Value of silver calculated on the basis of the amount per fine ounce returned to depositors of newly mined domestic silver produced in 1938, \$0.6464+.

Gold and Silver Used in Industrial Arts in the United States During the Calendar Year 1938

Issue by the mints and assay offices of gold and silver for industrialarts use has very substantially lessened since the monetary price of gold was fixed at \$35 per fine troy ounce and a one-fourth of 1 percent charge imposed, and the supplying of industry by commercial refiners of those metals has substantially increased. Previously the principal source of gold supply to industry was the mint service institutions.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1938, with the classes of material

from which they were made.

# ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

Bases Used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The quantity basis comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The value basis comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations the receipt classification item of "Domestic refinery bullion" includes that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from

small refineries that work only old materials.

Gold and silver production estimates.—These estimates consist of arrivals at United States mints and assay offices and at privately owned refineries (bullion-producing plants), of gold and silver from mines within the States and Territories of the United States, including the production of the Philippine Islands which comes to the United States for reduction. The portion of this figure representing mint

receipts is on the quantity basis.

Gold and silver consumption in industry.—These estimates comprise bar sales by the mints and assay offices for industrial use (partly estimated) plus similar items issued by private refiners, dealers (and manufacturers), as reported to the Mint Bureau, plus an estimate of domestic coin melted for industrial use; from the total of these is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net new materials consumed.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with

annual addition of new coinage and reported imports, and deduction of withdrawn coin, reported exports, and an estimate for industrial use; from 1928 to 1933 the additional factor of gold coin "earmarked," or set aside for foreign winers, was considered, such transactions being equivalent to exports—d releases thereof being equivalent to imports. After 1933 gold coine ouncbeen omitted as such; any unmelted gold coin on hand is treated a 27 ion. In 1928 minor coin was added, using only the 5-cent nicle and 1-cent bronze coins of the type commonly in circulation and consitering only the amounts coined and those withdrawn for recoinage. The monetary stock tables for a series of years have been revised to the establishing of the Federal Reserve System (1914) to ir we earmarked gold, and to include minor coin back to 1900. The item of coin withdrawn as used in the stock compilation omits the coin received for recoinage but not yet reviewed, which coin is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the

earlier years this was not always done.

<sup>1</sup> Coinage of domestie gold coin discontinued in 1933; see. 5 of the Gold Reserve Act of 1934 provides in part

Data for individual years published in reports of the Director of the Mint for 1931 and for prior years.
 The coinage of domestic gold coin was discontinued in 1933.
 Both standard and trade dollars. The silver dollar coinage of 1921-28 represents recoinage of an equivalent number of dollars converted to bullion under act of Apr. 23, 1918—259,121,554 for export to India and 11,111,168 for domestic subsidiary coin; total, 270,232,722.

<sup>\*\*</sup> Collaboration of the United States shall hereafter be paid out or delivered by the United States \* \* \*. All gold eoin of the United States shall be withdrawn from eirculation, and, together with all other gold owned by the United States, shall be formed into bars of such weights and degrees of fineness as the Secretary of the Treasury may direct."

2 Discontinued by act of Apr. 11, 1930.

<sup>&</sup>lt;sup>1</sup> For method of estimating, see p. 48.

Note.—The number of standard silver dollars coined to June 30, 1939, was \$47,629,915, which, added to the Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals \$48,776,774. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000, the net export from November 1919 to July 1920, in movement due to the high price of silver, was 28,287,142; those melted under the terms of the Pittman Act of April 23, 1918, totaled 270,232,722; those melted otherwise (mutilated, etc.) since 1883 numbered 227,992, and the number of Hawaiian dollars melted to June 30, 1939, was 455,329, a total disposition of 301,698,185, leaving in the United States on June 30, 1939, 547,078,589 standard silver dollars and 379,811,988 dollars in sibsidiary silver coin.

<sup>&</sup>lt;sup>1</sup> For 1934 and thereafter includes silver bullion revalued to \$1.29+ per fine troy ounce and set up a security against silver certificates.

<sup>2</sup> On Jan. 31, 1934, the weight of the gold dollar was reduced from 25.8 grains of gold nine-tenths fine to 15 5/21 grains nine-tenths fine, thereby giving gold a monetary value of \$35 per fine troy ounce, which compares with the previous \$20.67+ per fine troy ounce. Proclamation of Jan. 31, 1934.

Stock of Domestic Coin in the United States, December 31, 1938 1

Previous to 1914 (year Federal Reserve System established) figures are unrevised.
 Prior to 1934 gold monetary value was calculated on basis of \$20.67+ per fine troy ounce; 1934 and thereafter calculated on basis of \$35 per fine troy ounce.
 Includes coin in State and private banks as well as coin in tills and the hands of the public.
 Coin awaiting melting included with bullion item.

Data for individual years published in reports of the Director of the Mint for 1931 and for prior years.

Note.—Net exports are shown with a prefixed minus sign. The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deducted from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 toals, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, from 1897 to 1914 from daily London quotations, and since from daily New York quotations.

### FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production and coinage of gold and silver and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States Ambassadors and Ministers through the Department of State, and the replies in the form of

reports are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission, and the available data for the calendar year under review are usually incomplete. In a general way interrogatory answers are herein published as received, with the addition of equivalents. If inaccuracies are apparent, information that would warrant the making of possible corrections is often unavailable.

In the absence of dependable official returns from foreign countries the most reliable data available are used in compiling world statistics.

At \$35 per fine ounce of gold.

At the average price of fine ounce of silver in New York, \$0.45195.

For year ended Mar. 31, 1938.

Includes coin struck in prior years delivered in 1937.

There wer\_ produced for circulation 926 silver mint bars B (of silver fineness of coin, 0.880), each bar containing the same quantity of silver as 1,000 standard silver yuan (dollars). The bars consumed 699,437 fine ounces of silver having a value (on basis of \$0.45195 per fine ounce) of \$316,111.

<sup>&</sup>lt;sup>7</sup> Includes coinage during 1936 not previously reported, 22,136.398 yen. The value of the silver consumed in such coin has been computed at the rate of 45.399 cents per fine ounce. Ducats.

### REVISIONS, 1937 MONETARY STOCKS

Principal revisions of monetary stocks for 1937, published in last year's volume, give:

Canada's paper circulation reduced from \$269,782,000 to \$205,135,000 to eliminate amounts held in reserve by banks of issue.

British Honduras' paper circulation reduced from \$393,000 to \$274,000 to eliminate amounts held in government treasury.

British Guiana's paper circulation as \$1,515,000 instead of

\$1,386,000.

Paraguay's paper circulation as 1,241,446,000 pesos instead of

1,261,870,000 pesos.

Trinidad's gold stock as none instead of \$1,000; silver stock as \$132,000 instead of \$111,000; paper circulation as 2,308,000 West Indian dollars instead of 2,194,000.

# WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEAR 1938

material amounts of gold are not reported by several countries, such as amounts held in secret funds for stabilizing currencies (see footnote 6) and those hoarded or held outside of regularly reported stocks. The amount of silver in Bureau, central bank reports, and other official sources, except as indicated by footnote 1. It is understood that The following compilations have been made from answers to official questionnaires of the United States Mint circulation in many countries is not obtainable.

Population figures are principally from the Statistical Yearbook of the League of Nations, 1938-39.

Monetary stock of principal countries of the world, end of calendar year 1938 (subject to revision)

subsequent to 1701, at \$1.38 per fine ounce, which corresponds with a commercial ratio of silver to gold of approximately 15 to 1, the ratio which prevailed for over 100 years subsequent to 1687, as per tabulation elsewhere in this volume. From 1701 to 1840 the value corresponds with the average ratios of silver to gold as per the tabulation elsewhere in this volume. From 1841 the annual averages per fine ounce in London are used except for the years 1915 to 1921, and 1931 to 1937, when New York prices are used. Tabulations of silver quotations appear elsewhere in this volume.
